A The **Senator** Group company

C503-1 ANNE

Anne, contemporary and robust multipurpose healthcare arm chair with deep back for visitor, dining and activity areas.

Deep back

Stacks 5 high.

PRODUCT SUMMARY

Scope of Assessment:

From extraction of raw materials through to production of the final furniture unit (cradle to gate). See page 2 for more details.

Data Used:

All secondary data was obtained from the See website for warranty information. Ecolnvent database. used in conjunction with SimaPro 7.3.2, using European data

ENVIRONMENTAL SUMMARY

Functional Unit:

Primary data was used wherever possible A Seating solution designed and including for energy use during the core manufactured for a useful life of approx 10

MATERIAL DECLARATION

Material	Amount (kg)Total (%	6)	
abric	0.50 7.0	Global Warming Potential (Kg Co2 Eq):	22.02
oam	0.50 7.0	Recycled Content (% By Weight):	4.00
Plywood	6.00 84.5	Total Energy Consumption (Mj):	682.64
Steel	0.10 1.4	Recyclability (% By Weight):	99.00

Date of Production: October 2019

ENVIRONMENTAL PRODUCT ANALYSIS

This Environmental Product Analysis has been created in accordance with, and following the principles of ISO14025 and ISO14044. All the Life Cycle Analysis data has been compiled, processed and verified by Oakdene Hollins Ltd.

Compilation and processing of LCA data performed by Dr. Dan Skinner (Oakdene Hollins Ltd.)

Verification of LCA and environmental data performed by Dr. Adrian Chapman (Oakdene Hollins Ltd.)

SYSTEM BOUNDARIES

SUSTAIN

The Senator Group has for many years acknowledged that the We harvest the resources back from the retired products then than Recyclability in pure isolation.

Our business takes a truly holistic approach to the design, manufacture, supply and reclamation of our products. We see reclamation we aspire to minimise all environmental impacts of The Senator Group's products and processes.

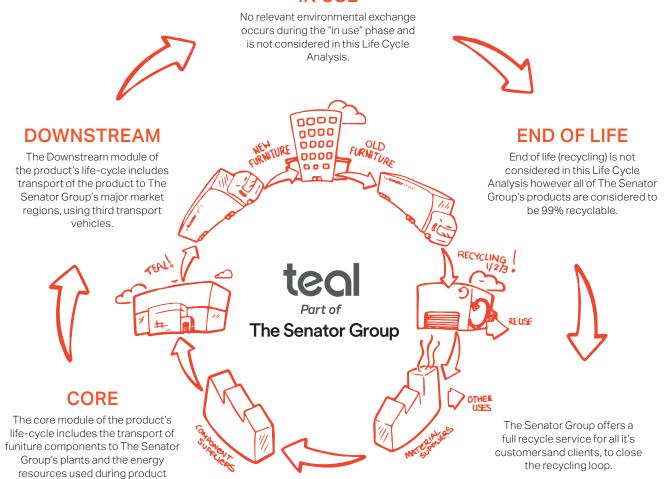

assembly/packing/loading and

transport.

key word upon which to focus our attention is Sustainability rather remanufacture or reintroduce the materials into our component manufacturers supply chain.

We believe in taking responsibility for our own actions ourselves, wherever possible, rather than relying on third parties, or this as a cyclical process. From design to manufacture, use and abdicating our responsibilities by offsetting. The process of Sustainability is a cyclical one we understand this and we actively pursue this in everything that we do.

IN USE

UPSTREAM

The upstream module of the product's life-cycle includes the extraction and treatment of raw materials, transport of the new material to the component suppliers and the manufacture of usable components from those materials.

SYSTEM BOUNDARIES

SYSTEM BOUNDARIES

Resource (Kg)	Upstream	Core	Downstream	Total
From the Air	20.11	20.11	0.00	21.60

First Certified Certified 1991

FURNITURE INDUSTRY SUSTAINABILITY PROGRAMME (FISP

Awarded by FIRA, this sustainability certificate is designed to monitor all sustainability aspects of a company's facilities and operations. The Senator Group achieved one of the first standard. sustainability certifications within the furniture industry - a public declaration of our commitment to improving our

performance in every possible

THE THREE R'S

ENERGY CHAIN OF MANAGEMENT:

to monitor all energy usage and Wood/MFC/MDF/Chipboard have a process to continually minimise energy usage. We believe Senator was the first company in the furniture industry to achieve this

CUSTODY

External proof that Senator has Independent certification to implemented a robust system prove Senator only purchases from manufacturers who can prove they purchase their raw details.

wood from sustainable sources.

ENVIRONMENTAL MANAGEMENT

From extraction of raw materials through to production of the final furniture unit (cradle to gate). See page 2 for more

Senator is committed to continually improving the sustainability of all environmental aspects within our business. To meet both international standards and our own environmental targets we apply the three R's principle-

REDUCE, REUSE AND RECYCLE.

Whilst recycling is the element which receives the most exposure it is actually the last option available and should never be the prime target in anyone's battle to reduce

It is our duty as individuals and as a company to initially attempt to Reduce usage. Then we should look to Reuse wherever possible and finally, only after these two processes have been exhausted, should we consider Recycling.

ASSESSMENT CONSIDERATIONS

The following necessary assumptions and considerations were made during the course of the Life-Cycle Analysis:

• Manufacture of the furniture components • The transport of all materials, factory in which the raw materials were processed, due to a lack of case-specific data.

was assumed to take place in the same components and finished products was assumed to be via 16-32t Euro 6 lorries.

• All LCA data was modelled using the IMPACT 2002+ (v2.06) method.
